

Insurance Certificate

For the medical care of an occupational accident or occupational disease

The insurance certificate gives the care facility and the doctor the right to send an invoice for medical expenses caused by the treatment of an occupational accident or occupational disease directly to the insurance institution. The insurance certificate is not the payment commitment for compensation of medical care. However, the compensation of medical expenses requires that the issue involves a compensable occupational accident or occupational disease. The insurance institution will decide if the invoice is compensable after receiving the necessary clarifications.
